EDUCATION

University of British Columbia

Sept 2023 – Present

B.Sc. Statistics

Dean's List (2023W - 2025W) • Indonesia Maju Full Scholarship • Outstanding International Student Award

SKILLS

Languages Python, R, SQL, HTML, CSS, Java, JavaScript, C++, MATLAB

Libraries pandas, NumPy, SciPy, scikit-learn, TensorFlow, PyTorch, matplotlib, seaborn, spaCy

Tools Git, GitHub, Jupyter Notebook, MS Office, Tableau, MySQL, Oracle, Canva, Figma

EXPERIENCE

Research Intern - Research Center for Data and Information Sciences

Jun 2026 – Present

The National Research and Innovation Agency of The Republic of Indonesia (BRIN)

- Conducting data-driven research on the market dynamics of Hoya plants using e-commerce transaction data.
- Designing web scraping and NLP pipelines to collect, clean, and classify large-scale marketplace datasets.
- Developing machine learning and forecasting models to estimate product value and predict future sales trends.

Web & Technical Support Coordinator - UI/UX

Mar 2026 – Present

Association for Women in Mathematics at UBC (AWM @UBC)

- Maintained website and digital forms, improving online engagement.
- Provided technical support and managed digital infrastructure for events.
- Streamlined online platforms and communication workflows.

PROJECTS

Credit Card Fraud Detection 

Nov 2025 – Dec 2025

- Built ensemble tree-based models (Random Forest, XGBoost, LightGBM, CatBoost) to detect fraud in highly imbalanced data.
- Best model: LightGBM (**Test ROC-AUC = 0.980**), ranking fraudulent transactions effectively.
- Conducted feature importance analysis to identify key PCA features driving predictions.
- Demonstrated potential for real-world fraud detection applications with robust performance.

E-Commerce Data Analytics 

Dec 2025 – Jan 2026

- Analyzed **~250,000 UK transactions** using Python, SQL, and Tableau.
- Built SQL queries to identify top products, revenue trends, and customer spending patterns.
- Developed Tableau dashboards to communicate actionable insights.

Twitter Sentiment Analysis (NLP) 

Feb 2026 – Mar 2026

- Cleaned and preprocessed Twitter sentiment data for multiple brands/games.
- Built Logistic Regression model, achieving **0.79 overall accuracy** with balanced performance.
- Visualized sentiment trends with word clouds and charts for actionable insights.

ACHIEVEMENTS

1st Place – DataQuest Competition 

Dec 2025

UBC Data Science Club

- Analyzed Vancouver business trends using time-series and machine learning models.
- Presented data-driven recommendations on emerging economic sectors.
