EDUCATION

University of British Columbia Bachelor of Science in Statistics - Dean's List Honors 2023/2024 and 2024/2025 - Awardee of Indonesia Maju Scholarship (Full-Ride Scholarship) - Outstanding International Student Award 2023	September 2023 - Present
State Islamic Senior High School 1 Ciamis (MAN 1 Ciamis) Mathematics and Science Intensive Class Program - Top Academic Achiever – Ranked 1st out of 290+ students, Class of 2023 - Full Scholarship Recipient – Recognized for academic excellence	July 2020 - May 2023

SKILLS

Hard Skills	R, Python, SQL, Machine Learning, Data Cleaning & Wrangling, Exploratory Data Analysis, Data Visualization (Tableau)
Soft Skills	Teamwork, Collaboration, Communication, Adaptability

EXPERIENCE

Student Researcher Research Experience Program <i>UBC Undergraduate Research Opportunities</i>	November 2025 - Present
- Analyzed seismic data from Turkiye using statistical modeling to examine relationships among earthquake parameters. - Studied seismic memory patterns and evaluated transferability to the Pacific Northwest for risk assessment. - Produced data-driven insights to support urban planning, disaster preparedness, and natural hazard risk assessment.	

PROJECTS

Credit Card Fraud Detection	November 2025 - December 2025
- Built and compared ensemble models (Random Forest, XGBoost, LightGBM, CatBoost) to detect fraudulent credit card transactions in a highly imbalanced dataset. - Achieved test ROC-AUC up to 0.980 (LightGBM), demonstrating strong predictive ability for rare fraud events. - Visualized transaction patterns, evaluated models with ROC curves and confusion matrices, and analyzed feature importance to interpret predictions.	
E-Commerce Data Analytics	December 2025 - January 2026
- Conducted data analysis on 250,000 UK-based e-commerce transactions using Python, MySQL, and Tableau - Built analytical SQL queries to identify top-selling products, monthly revenue trends, customer spending patterns, and product return behavior - Designed dashboards in Tableau to communicate insights and support data-driven business decisions	

ACHIEVEMENTS

1st Place of DataQuest Competition <i>UBC Data Science Club</i>	December 2025
- Analyzed long-term business trends in Vancouver to identify emerging economic sectors. - Built time-series and machine learning models to forecast business growth and decline. - Presented strategic, data-driven recommendations to inform investment and policy decisions.
